11. Prescriptive Recommendations & Containment Actions

[ ] 1. Block observed sender address and domain at the secure email gateway (SEG).
[ ] 2. Enforce domain-level DNS sinkholing for all identified suspicious/lookalike URLs.
[ ] 3. Revoke active user session tokens if credentials were submitted to target endpoints.
[ ] 4. Search tenant mailboxes for identical Message-ID, Subject, or attachment hashes to purge residual exposure.
[ ] 5. Submit extracted attachment hashes to Endpoint Detection and Response (EDR) blocklists.

12. Evidentiary Limitations & Chain-of-Custody Certification

Forensic Chain-of-Custody Certification:
This document is generated by MailTrace AI based on literal RFC-822 evidence headers. Public IP geolocation represents coarse regional estimates based on RIR allocations and does not establish street-level physical locations or the personal identity of the sender. All cryptographic hash sums (SHA-256) were computed over unaltered message byte streams and preserve complete digital non-repudiation chain of custody.
