Likely Attack Type:	**Credential Harvesting /■ Brand Impersonation Spear-■Phishing**	**Likely Objective:**	Exfiltrate corporate Microsoft c■redentials via disguised credent■ial-■collection landing pages.■

Executive Synthesis: Suspicious message exhibiting critical credential-harvesting indicators with severe sender spoofing, including failed DMARC and SPF checks alongside a deceptive lookalike domain.

Key Forensic Evidence Identified by LLM:
- Failed DMARC (p=reject) and SPF authentication from sending IP 203.0.113.25
- Lookalike domain micros0ft-example.com imitating Microsoft (registered 18 days ago)
- HTML display anchor showing microsoft.com while pointing to evil-tracker.example
- NLP Phishing Classifier flagged high confidence (89% probability) for credential harvesting language
- Suspicious embedded shortened link (bit.ly/3sample-invoice)

7. Extracted Indicators of Compromise (IOCs)

11. Prescriptive Recommendations & Containment Actions

[ ] 1. Block sending IP 203.0.113.25 and domain micros0ft-example.com on perimeter email gateway
[ ] 2. Revoke active sessions and force password resets for any recipient who accessed the link
[ ] 3. Search SIEM proxy/DNS telemetry for outbound HTTP requests to evil-tracker.example and bit.ly/3sample-invoice
[ ] 4. Purge matching message IDs from all internal Exchange/M365 mailboxes

12. Evidentiary Limitations & Chain-of-Custody Certification

Forensic Chain-of-Custody Certification:
This document is generated by MailTrace AI based on literal RFC-822 evidence headers. Public IP geolocation represents coarse regional estimates based on RIR allocations and does not establish street-level physical locations or the personal identity of the sender. All cryptographic hash sums (SHA-256) were computed over unaltered message byte streams and preserve complete digital non-repudiation chain of custody.
