Executive Synthesis: The analyzed email presents characteristics of Credential Harvesting Phishing with a deterministic threat score of 30/100 (SUSPICIOUS). Key driving indicators include 3 forensic flag(s). Adversary objective is assessed as: Theft of corporate directory or single-sign-on credentials via spoofed interfaces.

Key Forensic Evidence Identified by LLM:
- Global threat score evaluated at 30/100 (SUSPICIOUS severity).
- Forensic indicator: Reply-To header domain mismatch
- Forensic indicator: DNS Resolution Failure
- Forensic indicator: Credential harvesting or urgent security language
- NLP text assessment indicates 65% phishing probability.

`https:■/■/■account-■verification.■example/■login`	**10/100**	Suspicious security/■authentication keywords found:■ login,■ account

Observed Attachments & Cryptographic Checksums:

No file attachments detected in this message.

8. Network Transmission Path & Topology

Earliest Observable Sending IP:	**None identified**	**Reverse DNS / Host:**	Unknown

No sequential relay hops reconstructed from Received: headers.

Notice: Labeled strictly as observed infrastructure route. Does not represent physical attacker travel path.

9. Infrastructure & Domain Intelligence

No public IP intelligence enriched for this email.

11. Prescriptive Recommendations & Containment Actions

[ ] 1. Tag message header with [SUSPICIOUS] warning banner for internal recipient.
[ ] 2. Monitor user account for anomalous authentication or link traversal events.

12. Evidentiary Limitations & Chain-of-Custody Certification

Forensic Chain-of-Custody Certification:
This document is generated by MailTrace AI based on literal RFC-822 evidence headers. Public IP geolocation represents coarse regional estimates based on RIR allocations and does not establish street-level physical locations or the personal identity of the sender. All cryptographic hash sums (SHA-256) were computed over unaltered message byte streams and preserve complete digital non-repudiation chain of custody.
